ENDODONTIC REFERRALS

We are now very happy to offer a service for private referrals of endodontic treatments.

I already accept referrals, mainly from those attending my "hands-on" courses but also from other colleagues on an individual basis. However, we are now pleased to be able to offer this service to all dental practices. We will happily accept any simple or more complex cases or even the request for a second opinion.

How to refer?

Simply complete one of the enclosed referral forms or download one from our website www.laburnumdentalpractice.co.uk. We will then contact your patient directly and arrange their appointments.

Why refer to me?

In 2007, I completed an extended endodontic foundation course at Newcastle University and my goal is to achieve DWSI status in endodontics in the near future. I have experience of most of the rotary nickel titanium systems and trained in Switzerland at the Dentsply/Maillefer headquarters and also in Santa Barbara with Steve Buchanan who developed the GT system. I have been lecturing endodontic hands-on days in the region since 2001 and have been regional tutor for the MFGDP (now MJDF.RCS) since 2005.

How do we operate?

We always operate under rubber dam, using single-use rotary and NiTi files, irrigate with a combination of hypochlorite, EDTA and chlorhexidine and obturate using heated gutta percha techniques. I routinely use magnification for all restorative procedures and all referrals will be treated using an operating microscope. I feel that this is now essential for best quality endodontics.

What should your patients expect?

Be assured that your patients will receive an efficient, friendly and caring service. We aim to provide endodontic treatment of the highest quality and after its completion, unless you request otherwise, your patient will be referred back to you for definitive restoration of their tooth.

We look forward to hearing from you,

Yours Sincerely

TIM PEACH
